Solusi Tubrial 3 Fisika Dasor 1B ITA

olch: Wawank

## A. PERTANYAAN

. Unlik fidut 
$$\theta = \frac{\pi}{2}$$
 make  $W = 0$ 

## , unhuh usaha B

$$W_{avahx} = \overrightarrow{F}_{x} \cdot \overrightarrow{d}_{x}$$

$$= -F_{GIB} \cdot \widehat{i} \cdot (-d \cdot \widehat{i})$$

$$= F_{GIB} \cdot d$$

$$= F_{GIB} \cdot d$$

$$= F_{GIB} \cdot J$$

Jawaban: 
$$(-x, +y)$$

$$W_1 + W_2 = 0$$

$$W_1 = -W_2$$

kecepatan houstan, maha laju konstan begitup. energi lünetik honstan.

$$E_M = \pm mv^2 + mgh$$

Pada leasus (D) mobil mencilli bukit allan menyobahkan penergi pakensial meninghat dan the hansaya menurun.

Sehingga EM filak kekal

(5) Jawab: B

Alasan: Prinsip energi mekanik hekal jika honya Usoha yang dilakukan obh gaya non konservalif adolah hol.

WNK = 0

pada lians B, Fronkonservalif teggu lines terbudap arah perpindahan, Schingga WnonbonserVatif = FAK . d Cos 90° = 0

WNC = 0

Moha berlaku prinsip hele kalon eriergi.

$$W = -216 \times 10^{6} J$$

Usaha yang dilakukan adalah negatif, karena graya berlawanan arah dengan perpindahan

(2) 
$$W = F.5 \text{ GJB}$$
  
=  $(94 \text{ N}) (35 \text{ m}) \text{ GS} (25°) = 2980 \text{ J}$ 

$$F = \frac{W}{s \cos \theta} = \frac{-4.5 \times 10^{11}}{1.8 \times 10^{16} \cos 180^{\circ}} = \frac{2.5 \times 10^{5} \text{ N}}{1.8 \times 10^{16} \cos 180^{\circ}}$$

(4) 
$$h_f - h_0 = \frac{K_0 - K_f}{mg} = \frac{440J - 710J}{(35 kg)(9.8 m/s^2)} = 0.67 m$$

Dan gambar, Lita peroluh:

$$Gos \theta = \frac{1-H}{L} \qquad (L-H)$$

Cos  $\theta = \frac{1-H}{L} \qquad (l-H)$ 

Cos  $\theta = \frac{1-H}{L} \qquad (l-H)$ 

Cos  $\theta = \frac{1-H}{L} \qquad (l-H)$ 

Prinsip belukalan energi mekanik:

$$EM_f = \pm M_i$$

$$\frac{1}{2}mv_f^2 + mgh_f = \frac{1}{2}mv_o^2 + mgh_o$$

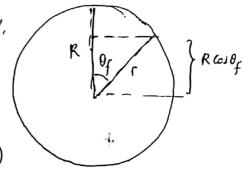

$$\frac{1}{2}mv_f^2 + mg(h_f - h_o) = \frac{1}{2}mv_o^2$$

$$mgH = \frac{1}{2}mV_0^2$$

$$H = \frac{V_0^2}{2g} = \frac{\left(2 \frac{m}{s}\right)^2}{2\left(9/8 \frac{m}{s^2}\right)} = 0/20 \frac{m}{s}$$

$$\theta = \cos^{-1}\left(\frac{1-H}{L}\right)$$
=  $\cos^{-1}\left(\frac{o_175 - o_{120}}{o_175}\right)$ 

(6) Energi Melianih pada sistem ini adalah kekal,

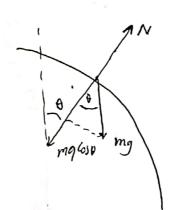

Sehingga pers 1) Menjadi,

Lintalan yang dilakhi adalah melingkar.

maka: 
$$f$$
 sentripetal =  $\frac{mv^2}{R}$ 

$$mg \cos \theta_f = \frac{mv^2}{R}$$

maka lijta dapat kan:

$$mgR = \frac{1}{2} mg k \cos \theta_f + mg \left(R \cos \theta_f\right)^2$$

$$1 = \frac{1}{2} \cos \theta_f + G \sin \theta_f$$

$$1 = \frac{3}{2} \cos \theta_f$$

$$\theta_f = G \sin^2 \left(\frac{2}{3}\right) = 48^\circ$$

$$V_f = \sqrt{\frac{2W_{nR}}{m}} + V_0^2 - 2g(h_f - h_0)$$

$$= \sqrt{\frac{2(-6.5 \times 10^{3})}{83}} + 0^{2} - 2(9.8)(-11.8)$$

$$-W_{NK} = EM_f - EM_i$$

$$= \left(\frac{1}{2}mV_f^2 - mgh_f\right) - \left(\frac{1}{2}mV_0^2 + mgh_0\right) = mgh_f - mgh_0$$

$$V_0 = V_f = 0 \text{ m/s}$$

1 63 188° = 4

maka: -Fs = mghf - mgho, hf = om

$$f = \frac{mg(h_0 - h_f)}{s} = 67(9,8)(4,10-6)$$

$$\overline{p} = \frac{Perubohan \ energi}{Wakhu} = \frac{k_f - k_o}{t} = \frac{\frac{1}{2}mV_f^2 - \frac{1}{2}mV_o^2}{t}$$

$$W = mg \rightarrow m = \frac{W}{g}$$

maka: 
$$\overline{p} = \frac{\int_{z}^{z} m v_f^2 - \int_{z}^{z} m V_o^2}{t}$$
,  $\forall_o = 0$ 

make: 
$$\overline{p} = \frac{WV_f^2}{29(t)} = \frac{(1.4 \times 10^4 \text{ N})(20)^2}{2(9.8)(5.6)} = 5.1 \times 10^4 \text{ W}$$

$$= (10+20)\frac{10}{2} = 5(30) = 150$$

$$W = \frac{1}{2}mV_f^2 - \frac{1}{2}mV_0^2$$
 ,  $V_0 = 0$ 

$$V_f = \sqrt{\frac{2W}{m}} = \sqrt{\frac{2(150)}{6}} = \sqrt{\frac{300}{6}} = 7.07 \, \text{m/s}$$
